Our Understanding Of The Current State

Acra Commercial DSCR Loan Process: As-Is

This As-Is analysis reflects Acra's Commercial DSCR flow specifically; process variations across the wider Non-QM product portfolio remain open discovery items.

Loan Set Up Setup / Processor — Day 1, Immediate	Account Management AM / Asst. AM — Day 1, Concurrent	Underwriting Underwriter — Within 24 hrs of alert	Legal / Entity Review Legal Team / PB&G — 24 hrs of receipt	Closing Closer — Same day; max 24 hrs	Funding Funder — Same day; upon signed docs
Receive file via Glide — single submission channel, no exceptions	Review file for LLC, Corporation, or Trust documents	Complete full credit, income, property, and entity analysis	Receive complete entity docs routed by AM upon setup completion	Receive automated alert immediately upon CTC issuance	Receive scanned signed closing package and wire tracking number from Closer
Route Consumer vs. Commercial to correct disclosure path	Conduct condo eligibility review: HOA, budget, litigation, occupancy	Calculate DSCR; review LTV, title, and program eligibility	Review Operating Agreement, Articles of Organization, Good Standing	Balance fees with Broker, Title, and Closing Agent; confirm Cash to Close	Verify signing package complete; confirm all conditions cleared
Confirm E-Consent and Broker Fees; condition E-Consent if missing	Order Day 1 reports: credit, lien/judgment, flood, Clear Capital AVM	Run DataVerify to confirm residence and flag recent transfers	Identify authorized signatories and full ownership structure	Draw documents per LOS Guide – Byte Doc Drawer Commercial v2.0	Confirm collateral docs routed to correct Acra Lending address
Pull SiteX; review property/parcel details, flag discrepancies for AM	Ensure third-party services ordered, received, and indexed	Review appraisal value, condition, and comparables support LTV	Confirm LLC listed as Borrower 1 on all loan documents	Run DataVerify final check for new findings from final parties	Release funding authorization once package and tracking number verified
Order Tax Certificate via DataTree; auto-pull Flood Certificate	Work with Broker/AE to gather conditions and set closing date	Confirm LLC listed as Borrower 1; review title transfer history	Review title for improper transfers among LLC and guarantors	Wet States: order wires delivered with documents	Confirm wire disbursement per Funding Shield instructions
Complete 6-point validation checklist (min docs, dup SSN, multi-pack, purchase contract, NMLS, listing check)	Call Title/Closing Agent/Escrow to confirm date and wire instructions	Same-day review of conditions received — no queuing	Complete review within 24 hours — do not wait for UW decision	Collect signed scans and wire tracking number from closing table	Re-clear Fraud Guard on any wire instruction discrepancy — no exceptions
Trigger Day 1 alert simultaneously to AM, Underwriter, and AE	Issue Clear to Close; Closer alerted immediately	Issue decision with conditions via email; phone call if complex	Route CPLs and Wire Instructions through Funding Shield Fraud Guard	Deliver complete signed closing package to Funder	Confirm funds disbursed; loan funded and AM/Broker notified

Acra Commercial DSCR Loan Process: To-Be

JAZZ ENABLEMENT VIEW

Loan Set Up Setup / Processor — Day 1, Immediate	Account Management AM / Asst. AM — Day 1, Concurrent	Underwriting Underwriter — Within 24 hrs of alert	Legal / Entity Review Legal Team / PB&G — 24 hrs of receipt	Closing Closer — Same day; max 24 hrs	Funding Funder — Same day; upon signed docs
Receive file via Glide — single submission channel, no exceptions	Review file for LLC, Corporation, or Trust documents	Complete full credit, income, property, and entity analysis	Receive complete entity docs routed by AM upon setup completion	Receive automated alert immediately upon CTC issuance	Receive scanned signed closing package and wire tracking number from Closer

Jazz Assistants for Acra Lending

PROPOSED SCOPE

End-to-end mortgage workflow orchestration with JazzX Fulfillment AI — Loan Set Up through Legal / Entity Review is in scope; Closing and Funding follow as future scope.

JazzX Fulfillment AI End-to-End Mortgage Workflow Orchestration

IN SCOPE

FUTURE SCOPE

JazzX Deployment Approach

Proposed Approach for DSCR Loans

POC + THREE PHASE ROADMAP · 18 WEEKS

POC + Three Phase Implementation Roadmap — validate core document intelligence and assessment capabilities within the JazzX UI, followed by progressive workflow, integration and calculation enablement across an indicative 18 weeks.

FUTURE SCOPE · Loan Closing · Loan Funding · Other loan types · Remaining third-party integrations · Broader end-to-end workflow automation

High-Level Roadmap

INDICATIVE · 18 WEEKS

Phase 0 POC followed by a three-phase implementation roadmap — testing runs alongside development, then Acra UAT and a production release close out each phase.

POC OBJECTIVE Validate JazzX's ability to split, classify, and assess representative Acra DSCR loan files using Acra guidelines within the JazzX UI, without external system integrations.

POC CAPABILITY SCOPE 1. Splitting & Classification - Split representative DSCR loan packages into individual documents - Classify and index documents using Acra's taxonomy - Present classification results for Acra validation 2. Jazz Assessment - Apply agreed Acra credit guidelines (single investor) - Perform subject property collateral review - Perform individual borrower review - Present findings, supporting evidence and exceptions within the JazzX UI <i>The individual-borrower starting point applies to Phase 0 only — from Phase 1 onward there is no restriction on borrower or entity type.</i>	POC DELIVERY, UAT & VALIDATION - Week 1 — kickoff, sample-loan selection, taxonomy and guideline alignment - Week 2 — splitting, classification and Jazz Assessment configuration - Week 3 — sample-loan execution, output review and refinement - Week 4 — Acra business UAT, observation closure and POC outcome readout - Agree representative POC loan scenarios and expected outputs - Agree validation and UAT acceptance criteria - Validate document splitting and classification results - Validate Jazz Assessment, collateral and borrower findings - Review exceptions, evidence and assessment explainability - Capture, prioritize and close agreed Acra SME feedback	EXPECTED POC OUTCOMES - Validated document splitting and classification approach - Validated Jazz Assessment output for the agreed scenarios - Acra SME feedback and UAT findings - Identified configuration refinements - Confirmed implementation considerations - POC outcome readout with findings and observations - Alignment on recommended next steps - Refined scope and priorities for the subsequent phases
--	--	---

POC OPERATING MODEL Representative redacted loan files manually provided or uploaded · JazzX configured on the Acra guidelines agreed for the POC · Outputs reviewed jointly by JazzX and Acra SMEs

NOT IN PHASE 0 Glide integration · Byte / LOS integration · Automated document or data write-back · Third-party vendor integrations · Automated ordering of reports · Production deployment · Closing or funding automation

0 POC & VALIDATION	1 LOAN SETUP & LOS INTEGRATION	2 GUIDELINES, CONDITIONS & LOS SYNC	3 INTEGRATIONS & CALCULATIONS
--------------------	--------------------------------	-------------------------------------	-------------------------------

Phase 1: Loan Setup & LOS Integration (Inbound)

PHASE 1

Index, classify, and route documents across Acra's Non-QM product portfolio, beginning with Commercial DSCR, to eliminate manual intake and accelerate downstream underwriting workflows.

What This Phase Covers

- Auto-classify every document in the LOS against the document list provided by the Acra team, across all categories and subcategories, and push it into Byte — Underwriter and Doc Drawer modules
- Classify DSCR-specific document types: Lease, Rent Roll, Operating Agreement, Articles of Organization, Certificate of Good Standing
- Classify HOA package components: budget, reserves, litigation disclosures, insurance
- Classify appraisal variants including Market Rent Schedule (Form 1007) alongside standard appraisal
- Classify Tax Certificate (DataTree), Credit Report, and Flood Certificate
- Route classified documents to Underwriting, AM entity review, or Condo Desk automatically

Ties to Acra Process

Loan Set Up stage (Byte) and AM's LLC/Entity and Condo Review intake

Outcome / Success Metric

Classification accuracy per document type; reduction in manual sorting time at indexing

0 POC & VALIDATION

1 LOAN SETUP & LOS INTEGRATION

2 GUIDELINES, CONDITIONS & LOS SYNC

3 INTEGRATIONS & CALCULATIONS

Compare file-level DSCR, LTV, credit, reserves, entity type, and property type against the applicable investor program grid, and generate conditions when a file falls outside guideline.

What This Phase Covers

- Compare the product matrix against Acra borrower and property eligibility guidelines
- Compare calculated DSCR, LTV, credit score, and reserves against the applicable program grid
- Auto-flag ineligible property types and condo litigation/reserve-shortfall findings
- Support program-specific overlays layered on top of base investor guidelines
- Version-control guideline updates so program-matrix changes don't require a rebuild

Ties to Acra Process

Underwriter's program eligibility review; AM's condo eligibility review and reserve checks

Outcome / Success Metric

Guideline-accurate, consistent condition generation independent of individual underwriter judgment

0 POC & VALIDATION

1 LOAN SETUP & LOS INTEGRATION

2 GUIDELINES, CONDITIONS & LOS SYNC

3 INTEGRATIONS & CALCULATIONS

Automatically detect when a required document is absent from the file and generate the corresponding condition, replacing manual checklist review.

What This Phase Covers

- Build a minimum-docs rule set per product, mapped to Acra's Critical Validation Checklist
- Auto-generate a condition when a required document — Operating Agreement, Lease, Appraisal, E-Consent — is not present
- Feed missing-document conditions into the 48-hour broker outreach and escalation protocol
- Time-stamp every auto-generated condition for the processing-log audit trail
- Curate the broker-facing email for missing documents

Ties to Acra Process

Broker communication and escalation; AM's “call broker for missing docs” steps

Outcome / Success Metric

Fewer missing-document conditions caught late in the file; faster, better-documented broker turnaround

0 POC & VALIDATION

1 LOAN SETUP & LOS INTEGRATION

2 GUIDELINES, CONDITIONS & LOS SYNC

3 INTEGRATIONS & CALCULATIONS

Cross-check documents already present in the file for inconsistencies that create underwriting risk and generate conditions systematically rather than case-by-case.

What This Phase Covers

- Verify all available documents for discrepancies and auto-generate the corresponding conditions
- Cross-check documents — e.g. lease rent vs. appraisal market rent — and flag material variance
- Cross-check borrower/entity name and address across the 1003, entity docs, title, and credit report
- Cross-check LLC ownership and signatory names across Operating Agreement, Articles, Good Standing, and loan documents
- Flag expired documents — credit report, appraisal, Certificate of Good Standing

Ties to Acra Process

Underwriter's DataVerify review and title-transfer check; Legal/PB&G entity review

Outcome / Success Metric

Directly addresses Acra's own flagged over-conditioning risk by catching real discrepancies systematically

0 POC & VALIDATION

1 LOAN SETUP & LOS INTEGRATION

2 GUIDELINES, CONDITIONS & LOS SYNC

3 INTEGRATIONS & CALCULATIONS

Push generated conditions into Byte as native LOS conditions with bidirectional sync, and auto-clear them the moment a satisfying document or data point is detected.

What This Phase Covers

- Push JazzX-generated conditions into Byte as native conditions
- Two-way sync: manual clears in Byte reflect back to JazzX, and vice versa
- Auto-clear conditions when the satisfying artifact is detected — e.g., a missing Operating Agreement condition clears once the document is received and classified
- Preserve Acra's same-day, no-queuing conditions-review SLA by pushing clear events back to Underwriter/AM immediately

Ties to Acra Process

Underwriting's same-day conditions-review loop; AM's post-underwrite condition tracking; CTC issuance trigger

Outcome / Success Metric

Eliminates manual double-entry between JazzX and Byte; reduces condition-clearing latency

0 POC & VALIDATION

1 LOAN SETUP & LOS INTEGRATION

2 GUIDELINES, CONDITIONS & LOS SYNC

3 INTEGRATIONS & CALCULATIONS

Phase 3: Prioritized Third-Party Integrations

PHASE 3

Establish live connectivity to the prioritized vendors so classification, condition generation and LOS sync all operate on verified loan data.

What This Phase Covers

- Integrate the prioritized third-party services within the Assistants, triggered from the LOS, with gating criteria and order tracking applied before orders are placed
- Property & Valuation: SiteX (parcel data), Clear Capital (AVM), DataTree (third-party tax certificate, vendor-restricted), Redfin (refinance listing check)
- Credit & Fraud Prevention: DataVerify (residence match, transfer/foreclosure signals), Funding Shield — Fraud Guard (CPL and wire-instruction verification)
- Legal & Entity Review: Polunsky, Beitel & Green (PB&G) portal for entity document legal review
- Supporting Systems: NMLS Consumer Access (license verification), Salesforce (CRM cross-check), USPS (address standardization)

Ties to Acra Process

Every vendor listed in Acra's live process — SiteX/DataTree/Clear Capital at Loan Set Up, DataVerify at Underwriting, Funding Shield at AM/Closing, PB&G at Legal/Entity Review

Outcome / Success Metric

Confirmed API or batch connectivity (not manual portal lookup) per vendor — determines which steps are automated and which remain human-led

0 POC & VALIDATION

1 LOAN SETUP & LOS INTEGRATION

2 GUIDELINES, CONDITIONS & LOS SYNC

3 INTEGRATIONS & CALCULATIONS

Build the calculation engine the earlier phases depend on — the DSCR, LTV, reserve and commercial metrics that determine eligibility and conditions.

What This Phase Covers

- DSCR: $\text{Gross Rental Income} \div \text{PITIA}$, with lease-vs-market-rent source logic and vacancy/rent haircut
- LTV / CLTV calculation
- Reserve requirement calculation — months of PITIA by DSCR band
- NOI and Debt Yield for Commercial DSCR (5+ unit / commercial properties)

Ties to Acra Process

Underwriter's DSCR/LTV/reserve review;
Commercial DSCR NOI/Debt Yield analysis

Outcome / Success Metric

Calculation outputs feed directly into Phase 2 conditions and the Phase 3 calculation worksheets

0 POC & VALIDATION

1 LOAN SETUP & LOS INTEGRATION

2 GUIDELINES, CONDITIONS & LOS SYNC

3 INTEGRATIONS & CALCULATIONS

Present every calculation in a structured, auditable worksheet so underwriters, investors, and auditors can see exactly how each number was derived.

What This Phase Covers

- DSCR worksheet: income source, haircut applied, PITIA components, resulting ratio
- LTV/CLTV worksheet: appraisal value, loan amount, lien stack
- Reserve worksheet: required vs. verified reserves
- Commercial NOI/Debt Yield worksheet: rent roll and expense breakdown
- Exportable and attachable to the loan file for investor delivery and audit

Ties to Acra Process

Underwriting decision documentation; AM's investor delivery; Legal/audit sign-off log

Outcome / Success Metric

Becomes the auditable evidence behind every automated calculation — critical for investor QC and regulatory review

0 POC & VALIDATION

1 LOAN SETUP & LOS INTEGRATION

2 GUIDELINES, CONDITIONS & LOS SYNC

3 INTEGRATIONS & CALCULATIONS

Next Steps

Inputs Required to Get Started

PHASE 0 CAN START NOW

Phase 0 can begin on Acra business inputs alone — LOS, Glide, third-party API documentation and production access are inputs for the subsequent implementation phases, not prerequisites for the POC.

1 REQUIRED FOR THE PHASE 0 POC

- Representative redacted DSCR loan packages
- Acra credit guidelines (Single Investor) applicable to the POC scenarios
- Acra document taxonomy and document list
- Expected assessment output and validation criteria
- Acra SMEs for guideline clarification
- Identified Acra UAT participants
- Agreed UAT scenarios and acceptance criteria

2 REQUIRED FOR SUBSEQUENT IMPLEMENTATION PHASES

- Detailed end-to-end workflow
- Byte / LOS technical documentation
- Glide technical documentation
- Third-party vendor and API documentation
- Sandbox or lower-environment access
- Security and architecture inputs
- Implementation stakeholders and system owners

NEXT-STEP SEQUENCE

Appendix

Questions for Discovery Deep Dive

Product & Guidelines

- Acra offers a comprehensive Non-QM product portfolio. Which product lines or origination workflows would you like us to prioritize for the initial implementation?
- What borrower and property scenarios are supported (e.g., individual investors, LLC borrowers, single-property, multi-property, duplexes, triplexes, fourplexes), and are there any portfolio or property-count limits?
- How are your underwriting guidelines managed? Are they standardized across products, or tailored by loan program, investor, or borrower type (e.g., LLC vs. individual)?
- How often do underwriting guidelines / overlays and eligibility matrices change, and how are updates managed?

Documents

- What is the required document set for a DSCR loan, including conditional documents (e.g., LLC/entity, HOA, condo)?
- Can you share the complete document inventory across all loan programs, including document variants?
- Are redacted or anonymized sample documents available for each required document type?
- How frequently do new document types or variants get introduced, and how are those changes communicated / managed?
- Is there an existing document taxonomy or naming convention the classification should align to?
- Which documents vary by property type or loan purpose, and which are manually reviewed today and why?
- Can you share your underwriting guidelines for document validation, discrepancy checks, expiry rules, and indexing?

Eligibility

- Can you share the eligibility grids (DSCR Band threshold, LTV/CLTV, credit score, reserves, seasoning) for each active program?
- Are there property type restrictions (ineligible property types) that should be hard-coded as automatic disqualifiers?
- What are the common ineligible scenarios and the most frequent exceptions?
- Specific rules for condo eligibility (litigation status, reserve requirements, budget review) that should trigger a condition or disqualification?
- How are multi-unit purchases within the same condo project handled — single loan, or one loan per unit?

Underwriting Calculations

- Can you share your DSCR calculation methodology, including PITIA treatment (Taxes, HOA, Insurance)?
- Formula and methodology for reserve requirement calculations, and how do reserves vary by DSCR band / risk tier?
- Methodology for NOI and Debt Yield, and for which property types (5+ unit / commercial) do they apply?
- Does calculation methodology vary by investor / program, or is there a single standardized formula set?
- Should calculation inputs be editable (e.g., adjusting a rent figure), and if so, how should overrides be tracked?
- Should calculation results be exported as a PDF, written back to Byte, or both?

Underwriting Ratio Rules

- How are borderline DSCR cases handled (e.g., DSCR ≈ 1.0)? When are policy exceptions considered, and what compensating factors support those exceptions?
- How is qualifying rental income determined (e.g., signed lease, appraiser's market rent), what selection rules apply (e.g., lower-of-the-two), and what vacancy factor or expense haircut is applied?
- When reviewing a DSCR calculation, how should the results be presented to underwriters and processors (a summary ratio, or a detailed calculation breakdown)?
- Are there existing UI mockups or examples of how you visualize (or want to visualize) DSCR income / expense data?

Entity / LLC Review

- Which entity types are accepted (LLC, Corporation, Trust)?
- How do underwriting rules differ for entity borrowers acquiring multiple units or properties compared to individual borrowers acquiring single property?
- Can you walk us through the entity review process beyond document collection (e.g., validation, eligibility checks, signatory verification)?

Conditions Management

- How are conditions currently created, tracked, and cleared in Byte, and where does automation exist today?
- How do you define “auto-clearing” — document detection, content validation against business rules, or both?
- How do you currently handle a condition that is partially satisfied (document present but data doesn't fully match)?
- What is the process for handling document discrepancies — automatic condition generation, manual flagging, or both?
- How should DSCR-specific conditions be presented compared to standard underwriting conditions (e.g., pass/fail vs. calculation breakdown)?

Automation & Exceptions

- Across your DSCR workflow, which activities are automated today, which remain manual, and where is human review or intervention required?
- Which manual tasks consume the most time?
- Where do errors most commonly occur?
- How are loan files assigned to processors, underwriters, and other team members when they are received?
- Who is authorized to approve policy exceptions, and how are those approvals documented and tracked?

Workflow & Handoffs

- Walk us through the as-is process end to end, from loan setup through to funding.
- Can you walk us through the key roles involved (e.g., Processor, Underwriter, AE, AM, Closer, Indexing) and their responsibilities and handoffs across the workflow?
- How do account management activities (e.g., order-outs, borrower communication) fit into the workflow — sequentially after underwriting or in parallel?
- Can you walk us through your broker communication and escalation process, including outreach cadence, follow-ups, and cancellation criteria?
- What are your end-to-end SLAs and the average time-to-close per loan?

Systems – LOS (Byte)

- Byte subscription / plan tier and contract terms (term, usage-based pricing) — does it include full API access, or are certain endpoints / webhooks gated to higher tiers?
- Does Byte support webhooks for key events (loan created, document uploaded, condition cleared/waived, status changed)? If not, polling and rate limits?
- Does Byte support two-way condition sync (JazzX creates conditions; manual clears/waives sync back)? What is the condition data model?
- Are LTV, CLTV, and DTI ratios returned natively via Byte's API, or manually entered today?
- Are sandbox / test environments available for Byte integration development, and what is the process for obtaining access?
- Who is the point of contact on Byte's side for technical integration questions, and can we set up a joint working session?
- Is Byte used exclusively for DSCR/Non-QM loans, or do you also process other loan types on it?

Systems – POS (Glide) & Architecture

- Is Glide the exclusive intake channel for all broker-submitted DSCR files, or are there other channels (direct upload, email, retail)?
- Does Glide support webhook notifications when a broker submits a file or uploads a document? If not, recommended integration pattern?
- What is the typical completeness of a loan package at the point of Glide submission?
- How do documents flow between Glide and Byte—does Glide serve purely as an intake channel, or are documents synchronized between the two systems?
- Who owns / manages the Glide relationship on your side?
- Salesforce: is the integration read-only (lookup / cross-check), or does it need write-back from JazzX?
- Can you share the system architecture across LOS (Byte), POS (Glide), and 3P systems, with a loan data-flow / sequence diagram?

Third-Party Vendors

- Which third-party orders must be triggered from JazzX, and how are they initiated today?
- Which specific vendors do you use for credit reporting, flood certification, homeowners insurance, and title / settlement?
- Is there an existing automated underwriting system (AUS) in use for DSCR loans? If so, which one, and the integration requirement?
- Existing commercial contracts or relationships with each required vendor (SiteX, Clear Capital, DataTree, Redfin, DataVerify, Funding Shield, PB&G, NMLS, Salesforce, USPS), or does JazzX need to establish its own for API access?
- For vendors where only portal access exists, can you request upgraded API access, or do we design around portal-only constraints?
- How does the account management team currently track third-party report ordering and status (LLC review, condo review)?

Compliance & Security

- What data residency, encryption, or compliance certifications (e.g., SOC 2) do you require from JazzX and newly integrated vendors?
- How are Funding Shield/Fraud Guard decisions handled, and what audit trail or evidence must be retained?
- Are there specific data-retention requirements for classified documents, calculation worksheets, or condition history?
- What internal, investor, or regulatory compliance requirements govern your DSCR/Non-QM lending process?
- Is there a compliance or QA team that reviews DSCR loan decisions post-closing, and what data / reporting do they require?
- What does a “defensible audit trail for every cancellation decision” require in practice?

Engagement

- What is the expected growth in DSCR volume over the next 12 months (for scaling / performance)?
- Is there a client-driven target deployment date we should plan the phased rollout around?
- What business outcomes, accuracy thresholds, and UAT acceptance criteria should define success for the Phase 0 POC?
- Who are the key stakeholders for ongoing discovery, and who has final sign-off on requirements / scope changes?
- What involvement and availability can Acra provide for discovery sessions, sample-data sharing and UAT?
- Do you have preferred collaboration tools or project management practices for tracking requirements, issues, and project progress?
- Are there any other systems, vendors, or dependencies not yet discussed that materially affect scope (separate DMS, pricing engine, compliance platform)?

Thank You
